Kaunas University of Technology

Title of the Faculty

Title of the laboratory work

Laboratory work report

Name of the study module (code)

Prepared by

Name Surname

Supervised by

Abbreviated job title and academic degree Name Surname

City, year

Kommentiert [A1]: This document is a template for a written work that meets formal requirements. The template is partially filled in with explanatory text and sample illustrative material. Please edit the template as follows: revise the text marked in yellow, remove the explanatory text in Chapters 1 and 2, delete figures, tables, irrelevant pages, comments, and any other unnecessary elements.
We recommend that you first carefully read the described requirements and recommendations. A written work prepared using this template will meet the requirements; however, after completing the work, you must check whether there are any inconsistencies and, if so, revise the document to ensure full compliance with the requirements.

Kommentiert [A2]: Delete the text marked in yellow and enter your own information, for example, instead of "Title of the faculty", enter the name of the faculty you are studying in. No text highlighted in yellow should remain in the final version of the completed work.

Kommentiert [A3]: At the University, written work is usually supervised by academic staff who hold the following job titles (their abbreviations are provided in brackets):
professor (prof.),
associate professor (assoc. prof.),
assistant (asst.),
senior lecturer (sr. lect.),
lecturer (lect.),
junior assistant (jr. asst.),
chief researcher (chief res.),
senior researcher (sr. res.),
researcher (res.), junior researcher (jr. res.).
Most academic employees hold an academic degree:
doctor (Dr.),
habilitated doctor (Habil. Dr.).

An example of how to write the supervisor's job title and academic degree next to their name is as follows: "Prof. Dr. Name Surname."

If you have any questions about which job title and/or academic degree should be indicated, please get in touch with the teacher of your study module.

Table of Contents

List of tables 3
List of figures 4
Introduction 5
1. Title of the chapter 6
1.1. Title of the section 6
1.2. Title of the section 6
1.3. Title of the section 7
2. Title of the chapter 8
2.1. Title of the section 8
2.2. Title of the section 9
2.2.1. Title of the subsection 9
2.2.2. Title of the subsection 10
2.2.3. Title of the subsection 11
2.3. Title of the section 11
2.4. Title of the section 12
Conclusions and recommendations 13
List of references 14
Appendices 15
Appendix 15

Kommentiert [A4]: All numbered and unnumbered parts of the written work (introduction, chapters, sections, subsections, conclusions, bibliography, appendices (if any)) are included in the automatically generated table of contents (this table cannot be edited manually!).
To update the table of contents, right-click anywhere in the table of contents and select "Update field". You will be prompted to choose between "Update page numbers only" or "Update entire table of contents". Then select one of the options: 1) "Update page numbers only" – only the page numbers of the tables will be changed, 2) "Update all table of contents" – the headings and their pages will be updated, and new headings will be added. If a heading is missing after updating the entire table of contents, check that the heading style has been applied to the relevant heading and then update the entire table of contents again. You can select the style in the template menu bar under Home > Styles. More detailed descriptions of the styles are provided in the Appendix to this document.

List of tables

Table 1. Components of the report on the laboratory work 7
Table 2. Requirements for the preparation of written works 8
Table 3. Relative unit of average short-term transient inductive reactance and electromotive force (Azubalis and Jonaitis, 2023) 9

Kommentiert [A5]: If tables are used in the work, this section contains an automatically generated list of tables (indicating the number, title, and page of the figure). Otherwise, delete the page.
This list cannot be edited manually. To update the list of tables, right-click anywhere in the list and select "Update field". You will be prompted to choose between "Update page numbers only" or "Update entire table of contents". Then select one of the options: 1) "Update page numbers only" – only the page numbers of the tables will be changed, 2) "Update all table of contents" – the titles of the tables, their pages, and new titles will be updated. If, after updating the entire list, an entry about the table is missing, check if the heading of the table has been inserted correctly. The heading of the table is inserted by selecting the table, right-clicking on the table, and selecting "Insert heading". The number of the table will automatically appear in the "Heading" field of the window that opens. Next to it, enter the word "Table" and the title of the table, for example, "Table. Title of the table".

List of figures

Fig. 1. The simplest three-phase circuit (Azubalis and Jonaitis, 2023) 10
Fig. 2. The connection between social research and problem solving (Vaitkiene et al., 2024) 10

Kommentiert [A6]: If illustrations are used in the work, this section contains an automatically generated list of figures (indicating the number, title, and page of the figure). Otherwise, delete the page.
This list cannot be edited manually. To update the list of figures, right-click anywhere in the list and select "Update field". You will be prompted to choose between "Update page numbers only" or "Update entire table of contents". Then select one of the options: 1) "Update page numbers only" – only the page numbers of the images will be changed, 2) "Update all table of contents" – the titles of the figures, their pages, and new titles will be updated. If, after updating the entire list, an entry about the figure is missing, check if the heading of the figure has been inserted correctly. The heading of the figure is inserted by selecting the figure, right-clicking on the figure, and selecting "Insert heading". The number of the figure will automatically appear in the "Heading" field of the window that opens. Next to it, enter the abbreviation "Fig." and the title of the figure, for example, "Fig. Title of the figure".

Introduction

[AFTER READING THE TEXT, DELETE IT] The introduction briefly formulates the goal, task, and objectives. The introduction may provide a brief theoretical justification if only a few short definitions of concepts are provided.

1. Title of the chapter

[AFTER READING THE TEXT, DELETE IT] This section describes the essence of a laboratory report, aspects of its preparation, and structural parts.

1.1. Title of the section

[AFTER READING THE TEXT, DELETE IT] The essence of the report on the laboratory work. A laboratory work report typically includes the description of the laboratory task performed and specific actions that were conducted to complete the task. In addition to this, the main methods, specifications, technologies, resources and materials that were used during the laboratory work are described. The main body of the laboratory report also presents the main stages and processes that were carried out and concludes with the insights that are provided as conclusions (Daunorienė ir kt., 2020)1. The report is typically based on the accurate and factual information. It must also clearly state the objective and tasks of the experiment or laboratory work, the methods applied, and the results. The report may contain a comparison of research results obtained by other authors. The report has to be written in a manner allowing its reader to perform a similar experiment and verify the correctness of the results obtained.

The benefit to the student. Preparation of the report on the laboratory work develops abilities to analyse and summarise information in a clear and precise manner, following a certain structure and consistency, describe the task performed and the results achieved, as well as formulate relevant and valid conclusions. It should also be noted that preparing a laboratory report develops the ability to present and demonstrate how a particular scientific method or model works in practice when performing certain laboratory work.

1.2. Title of the section

[AFTER READING THE TEXT, DELETE IT] The aspects of the preparation of the report on the laboratory work. The main components of the report on the laboratory work are described in Table 1. The accuracy of facts, results, and methods chosen, the consistency of the laboratory work process, and the conciseness and clarity of the laboratory report are essential features of a well-written, high-quality laboratory report. It is also important to remember that the laboratory work report must mention the objective of the laboratory work or experiment, the research methods used, the results, and the conclusions. Sometimes, depending on the nature of the laboratory work, a short summary may also be added. The length is set by the teacher, who coordinates the module and formulates the task. Usually, the length of the report on the laboratory work is no less than 3–5 pages (not including the title page and appendices).

[1] Daunorienė, A., Simonaitienė, B., Ukvalbergienė, K., Daubarienė, A., Česonienė, R. ir Ratkevičienė, M. (2020). Studentų pasiekimų vertinimo metodai ir grįžtamasis ryšys: metodinė priemonė aukštųjų mokyklų dėstytojams. Technologija. https://doi.org/10.5755/e01.9786090217009.

Table 1. Components of the report on the laboratory work

Structure of the report on the laboratory work	**Description and requirements**
Heading page	Submitted using the templates approved by the order of the University's rector.
Introduction	A short formulation of the task (objective) is presented.
Theoretical substantiation	A theoretical background, necessary to carry out the laboratory work is described. If only several short definitions of the concepts are provided, they may be included in the introductory part.
Experimental section	The process of performing the task, methods, empirical material, working conditions, tools or software that have been used to carry out research are described in this section.
Results	Presentation of the results obtained and problems encountered are presented.
Conclusions and recommendations	Summary/conclusions of the performed task and recommendations are provided.
List of references	The list of references used in the report is presented.

The laboratory work report is prepared using this standard form and laid out in accordance with the main writing styles and their descriptions provided in the appendix.

1.3. Title of the section

[AFTER READING THE TEXT, DELETE IT] The assessment aspects of the report on the laboratory work. A report on the laboratory work is usually assessed according to the ability of a student to explain what has been done and why, the results obtained and their significance, whether the structure of the report is clear, etc. The specific assessment criteria are identified by the lecturer giving the task.

2. Title of the chapter

[AFTER READING THE TEXT, DELETE IT] The formal requirements for written work are provided in this chapter. Students of Kaunas University of Technology (except for the third cycle students) must comply with the specified requirements when preparing their written works. The formal requirements define the requirements for the preparation of text, illustration materials (tables, figures, graphs, formulas, etc.), and appendices.

2.1. Title of the section

[AFTER READING THE TEXT, DELETE IT] Preparation of the text of the written work. The text of the written work must be prepared according to the formal requirements specified in the table (see Table 2).

Table 2. Requirements for the preparation of written works

Page dimensions and margins	A4 (210 x 297 mm), margins: 30 mm on the left side, 10 mm on the right side, 20 mm on the top and bottom.
Numbering of pages	Pages are numbered consistently, counting from the title page, and numbers are written starting with the table of contents. The page number is written at the bottom of the right margin in Arabic numerals without dots.
Font of the text (including the titles of chapters, sections and subsections)	Arial, 12 pt, in tables and figures – 10 pt.
Spacing between the lines	Spacing between the lines – 1.15, in tables – 1.
Spacing between the paragraphs	Spacing before, after and between paragraphs – 10 pt, in tables – 3 pt.
Alignment of the text	Indentation of the first paragraph on both sides is not applied.
Division of the text into sections and their numbering	The text is divided into chapters, sections and subsections. Unified three-digit numbering is recommended for all the components of the written work, separating the digits by dots, for example, 1., 1.1., 1.1.1. Numbering the written work chapters is not applied to the introduction, conclusions and list of references. Each chapter begins on a new page. The title of a section or subsection cannot be on one page while the text starts on the next page.
Emphasising the text using font	To emphasise the most important words, terms, etc., bold font can be used in the text of the written work. Provided examples, non-Lithuanian words and titles are written in italics. If a word or a phrase is emphasised in an example written in italics, it is written in ***bold*** or *underlined*. The chosen method of emphasis in the text should be used consistently throughout the entire text.
Footnotes	Footnotes at the bottom of the page may be used for the provision, specification, etc. of the references to the additional information provided in the written work (if that source of information is not included in the list of references).

Formatting the written work using the created styles will help you prepare the written work in compliance with formal requirements more quickly. Use the style gallery in the template menu bar (*Home* > *Styles*). For example, to format the title of the chapter, select the text to be formatted and choose *Home* > *Styles* > *1. Heading 1;Chapter*.

The main writing styles required for the preparation of the report and their descriptions are provided in the Appendix (see Appendix 3).

2.2. Title of the section

[AFTER READING THE TEXT, DELETE IT] Preparation of illustration materials. The written work may contain illustration materials, such as tables, figures (photographs, graphs, diagrams, or other illustrations), formulas, drawings, etc. Illustration materials may be presented in the text immediately after they are referenced or, if they are extensive, as appendices at the end of the written work.

2.2.1. Title of the subsection

[AFTER READING THE TEXT, DELETE IT] Requirements for the preparation of tables and figures. Tables and figures in the text of the written work are numbered with Arabic numerals throughout the text (e.g., Table 1. Table 7. Fig. 3). The word "Table" or the abbreviation "Fig." is written in lowercase letters and bold font, followed by a number (Table 5. Fig. 7). If there is only one table or figure in the written work, they are not numbered but written as Table or Figure. It is required to indicate the source next to the title of the table or figure if the author of the written work did not create them. No dot is written after the title of the table or figure.

Tables are aligned to the left margin. The text in the columns of the table is aligned to the left or centred. The style of tables must be consistent throughout the written work. The titles of tables are written above the table in 11 pt font and aligned to the left. An example of a table is provided below (see Table 3).

Table 3. Relative unit of average short-term transient inductive reactance and electromotive force (Azubalis and Jonaitis, 2023)

Electrical machines	X″∗N	E″∗N
Turbogenerator (SN up to 100 MW)	0.123	1.08
– „– (SN from 100 MW to 300 MW)	0.2	1.13
Hydro generator with suppression winding	0.2	1.13
– „ – without suppression winding	0.27	1.18
Synchronous compensator	0.2	1.2
Synchronous engine	0.2	1.1
Asynchronous engine	0.2	0.9
Generalized load	0.35	0.85

If the author wants to number the rows in the table, a dot is not written after the numbers, as the inner frames of the table serve as punctuation marks. For the same reason, punctuation marks are also unnecessary after concluding phrases or sentences in tables. A single principle should be followed throughout the table. There should be no empty rows or

columns in the table. If a cell in the table has no value, a dash is written. The units of measurement for the numerical values presented in the table are written only next to the title of the table, in parentheses, or next to the title of the table sections, after a comma, if the units are different.

Recommendations for the preparation of tables:

- Tables should be simple, without complex formatting or merged cells.
- Use the “Table” function to create tables.
- Single-cell tables should not be treated as tables; it is better to use bullets.
- Tables and images should not be placed in text boxes.
- When writing continuous text (a paragraph) in a table, do not artificially break lines with the Enter key.
- If the author wants to use special symbols in tables to highlight text, they must be taken from the font used, instead of the symbol font.

Figures are centred. Their titles are written below the figure in 11 pt font and centred. A figure is any diagram, chart, photograph, or other illustration material. Examples of images are provided below (see Fig. 1 and Fig. 2).

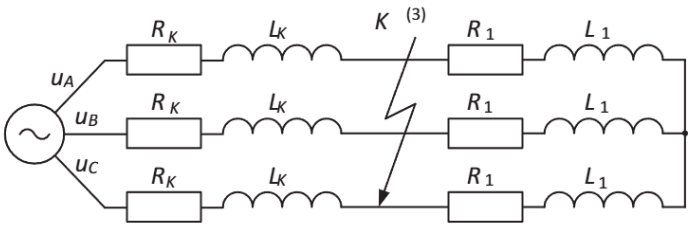

Fig. 1. The simplest three-phase circuit (Azubalis and Jonaitis, 2023)

Fig. 2. The connection between social research and problem solving (Vaitkiene et al., 2024)

It is recommended that the colour contrast of illustrations meet the AA level requirements.

2.2.2. Title of the subsection

[AFTER READING THE TEXT, DELETE IT] Requirements for formulating formulas. Formulas presented in the text are aligned to the left margin. The meanings of letters and symbols must be explained below the formula in the order in which they appear in the formula. The first line of the description begins with the word "where."

Formulas are numbered with Arabic numerals. The number consists of the chapter number and the formula sequence number in that section. The numbers are separated with a dot. If

there are not many formulas in the written work, they can be numbered consecutively, not according to the chapter.

First example of a formula:

Calculation of the profit received after selling a house in a respective country is calculated according to Formula (1):

$$p = k_i - (s + t_i + r_i + v_i); \quad (1)$$

where p_i – company's profit for a sold modular pre-fabricated house in the country *i*;
k_i – average price for one modular pre-fabricated house in the country *i*;
s – cost of production and assembling of the house (excluding VAT);
t_i – commission fee paid to an agent for finding a client in the country *i* (varies between 1% and 3%);
r_i – transportation costs to the country *i*.

Second example of a formula:

Excess is calculated according to Formula (1.2.3):

$$E = \frac{1}{nD^2}\sum_{i=1}^{N}(x_1 - \overline{x})^4 - 3; \quad (1.2.3)$$

where n – measurement number; $\bar{x}$ – arithmetic average of measurements; D – dispersion of measurements.

Recommendations for the preparation of formulas:

- Formula fonts must be uniform.
- All formulas must be edited using the "MS Word" Equation Editor: Insert > Equation. The entire formula, not just part of it, should be written using the Equation Editor.
- If the formula does not contain any special characters that are only used in the Equation Editor, simple formulas such as f(x) = a + b2 should be written in plain text instead of the formula format.

2.2.3. Title of the subsection

[AFTER READING THE TEXT, DELETE IT] Requirements for the preparation of drawings and other technical documents. Text is entered in the drawings and other technical documents according to the requirements established in the specific methodological guidelines of the faculty. Drawings are made according to the regulations for the preparation of drawings; each drawing must feature a frame and the main table of the drawing.

2.3. Title of the section

[AFTER READING THE TEXT, DELETE IT] Requirements for the preparation of appendices. An appendix to the written work is an individually executed component of the text of the written work. An appendix is usually identified in text by writing the word 'Appendix' in brackets, and, if the report contains more than one appendix, its number, for example (see Appendix 5). If there are many appendices or their format differs from the other parts of the written work (A4), they can be provided as an individual volume.

Each appendix starts on a new page. The word ‘Appendix’ and the appendix number are written at the beginning of the appendix on the right side. The title of each appendix is located below the appendix mark, centred and capitalised. The word ‘Appendix’, its number and title are written in bold.

2.4. Title of the section

[AFTER READING THE TEXT, DELETE IT] Quotation in written works. The use and citation of other authors' ideas and research results in written works is an important part of scientific communication. The sources quoted in the prepared work have to be indicated both in the text and in the list of references. Authors must indicate the used and quoted information sources – a book, an article in a journal, an internet blog or any other document – while writing work and using the ideas, original text or narrating the ideas by another author. Each quotation must be described according to the standards of bibliographic notes, specifying the main components of the bibliographic notes.

If text generated by GenAI tools is used in the work, it must be clearly and openly indicated which tools were used, in which parts of the content GenAI was used, and/or what queries were used. References are provided in the text, bibliography, and appendices.

At Kaunas University of Technology, two citation styles are used for the quotation of information sources in the text and preparation of bibliographic descriptions in the list of references, depending on the science field: ISO 690:2021 and APA 7. The major study programme determines which style should be used when preparing a written work.

LST ISO 690:2021 is applied to written works of the study programmes of physical sciences, technologies and biomedicine**.** It is an international standard prepared by the Technical Committee ISO/TC 46 Information and documentation of the International Organisation for Standardisation (ISO) “ISO 690:2021 Information and Documentation – Guidelines for Bibliographic References and Citations to Information Resources” that was taken over by the Lithuanian Standards Board as an identical Lithuanian standard LST ISO 690:2021

When using the LST ISO 690:2021 numbered reference method (numeric system) to quote a document, the reference number is inserted into the text in square brackets. When authors are mentioned in the text, only their surnames are written without their full names or initials, except in cases where the mentioned authors have the same surnames. In such cases, initials are given.

The rules of APA (American Psychological Association) referencing are applied to written works of the study programmes of social sciences and humanities. They are provided in the methodological tool “Publication Manual of the American Psychological Association” (2020).

When quoting in the text, the name(s) of the author(s) and year(s) are indicated in parentheses. For example: (Matulaitis, 2019), (Smith and Katz-Gero, 2016). If the name(s) of the author(s) is/are part of the sentence, then the year of publication of the source is indicated, for example, Matulaitis (2019), Smith and Katz-Gero (2016).

Conclusions and recommendations

1. [AFTER READING THE TEXT, DELETE IT] Conclusions summarise the results and must correspond to the tasks set out in the report.
2. ...

List of references

Kommentiert [A7]: Depending on the citation style, alphabetical order, or the order of sources in the text, only bibliographic descriptions of the sources used (cited, paraphrased, or at least mentioned) in the written work are provided.

Kommentiert [A8]: Example of bibliographic descriptions in a list of references according to the APA 7 citation style. This style is used in written works in the social sciences, humanities, and arts.

Kommentiert [A9]: Example of bibliographic descriptions in a list of references according to the LST ISO 690:2021 standard. This style is used in written works in the fields of physical and technological sciences.

Appendices

[AFTER READING THE TEXT, DELETE IT]

Kommentiert [A10]: Appendices are presented in the order in which they are mentioned in the text. Each appendix begins on a new page. The word "Appendix" and the appendix number are written on the right side at the beginning of the appendix. The title of the appendix is placed below the appendix mark, centred and capitalised. The text of the appendix mark and the title of the appendix are written in bold.
If there are no appendices in the written work, remove this page.

Appendix

Main styles of written works and their descriptions

Title of the style	Title of the style in the gallery	Formal requirements of the style	Description of the use of the style
Heading non-TOC	Heading non-TOC	Font size 12 pt, bold font, spacing between the lines – 1.15. spacing before and after the heading – 10 pt, centred alignment.	Headings that are not included in the content: “Table of contents” and the titles of appendices.
Heading without No.	Heading without No.	Font size 12 pt, bold font, spacing between the lines – 1.15. spacing before and after the heading – 10 pt, centred alignment, heading is written on a new page – after the page tab.	Headings that are included in the content but are not numbered: “List of tables”, “List of figures”, “List of abbreviations and terms”, “Introduction”, “Conclusions”, “List of references”, “Appendices”.
Heading_1.Chapter	1.Heading_1.Chapter	Font size 12 pt, bold font, spacing between the lines – 1.15. spacing after the heading – 10 pt, alignment on both sides, heading is written on a new page – after the page tab.	Chapter headings that are included in the content and are numbered.
Heading_2.Section	1.1._Heading 2.Section	Font size 12 pt, bold font, spacing between the lines – 1.15. spacing before and after the heading – 10 pt, alignment on both sides, numbering linked to the higher-level heading.	Section headings that are included in the content and are numbered.
Heading_3.Subsection	1.1.1._Heading 3.Subsection	Font size 12 pt, bold font, spacing between the lines – 1.15. spacing before and after the heading – 10 pt, alignment on both sides, numbering linked to the higher-level heading.	Subsection headings that are included in the content and are numbered.
Text	Text	Font size 12 pt, spacing between the lines – 1.15. spacing before the paragraph – 10 pt, alignment on both sides.	Text in all parts of the written work (introduction, chapters, sections, etc.).
Lists with numbers	1. Lists with numbers	Indentation of the first paragraph – 0.63 cm, font size 12 pt, spacing between the lines – 1.15.	Text presented in a numbered list.

		spacing between paragraphs of the same style – 0 pt, spacing after the list – 10 pt, alignment on both sides.	
– List with bullets	– List with bullets	Font size 12 pt, spacing between the lines – 1.15. spacing between paragraphs of the same style – 0 pt, spacing after the list – 10 pt, alignment on both sides.	Text presented in a bulleted list.
Footnote text of the page	Footnote text of the page	Font size 10 pt, spacing between the lines – 1.15. spacing before and after the list – 0 pt, alignment on both sides.	Text presented in footnotes.
Title of the table	Title of the table	Font size 11 pt, spacing between the lines – 1.15. spacing before the title – 10 pt, after the title – 3 pt, alignment to the left edge.	Titles of tables (the word "Table" and the number are written in bold font).
1st line of the table	1st line of the table	Font size 10 pt, bold font, spacing between the lines – 1.15. spacing before and after the paragraph – 3 pt, alignment to the left edge.	Text in the first line (heading) of the table.
Table	Table	Font size 10 pt, spacing between the lines – 1, spacing before and after the paragraph – 3 pt, alignment to the left edge.	Text in the table.
Title of the figure	Title of the figure	Font size 11 pt, spacing between the lines – 1.15. spacing before and after the title – 10 pt, centred alignment.	Titles of figures (the abbreviation "Fig." and the number are written in bold font).
Figure	Figure	Spacing before and after the figure – 10 pt, centred alignment.	Figure, illustration.
Bibliography (ISO)	1.Bibliography (ISO)	Font size 12 pt, spacing between the lines – 1.15. spacing between paragraphs of the same style – 2 pt, alignment on both sides.	Sources listed in the bibliography and list of information sources (when the work is prepared according to ISO 690:2021).
Bibliography APA 7	Bibliography APA 7	Reverse insertion – 1.27. font size 12 pt, spacing between the lines – 1.15. spacing between paragraphs of the same style – 2 pt, alignment on both sides.	Sources listed in the bibliography and list of information sources (when the work is prepared according to APA 7).
Appendix	1 Appendix	Font size 12 pt, bold font, spacing between the lines – 1.15. spacing before	The word Appendix, appendix number,

		and after the heading – 10 pt, alignment to the right edge.	
TOC_1	TOC_1	Font size 12 pt, spacing between the lines – 1.15. indentation – 0.64.	Headings in the table of contents that are not numbered (“List of tables”, “List of figures”, “List of abbreviations and terms”, “Introduction”, “Conclusions and recommendations”, “List of references”, “List of information sources”, “Appendices”) and the numbered heading “Title of the chapter”.
TOC_2	TOC_2	Font size 12 pt, spacing between the lines – 1.15. indentation – 0.96.	Heading "Title of the section" in the table of content, lists of tables and figures.
TOC_3	TOC_3	Font size 12 pt, spacing between the lines – 1.15. indentation – 1.28.	Heading "Title of the subsection" in the table of content.
